

3D avatar body

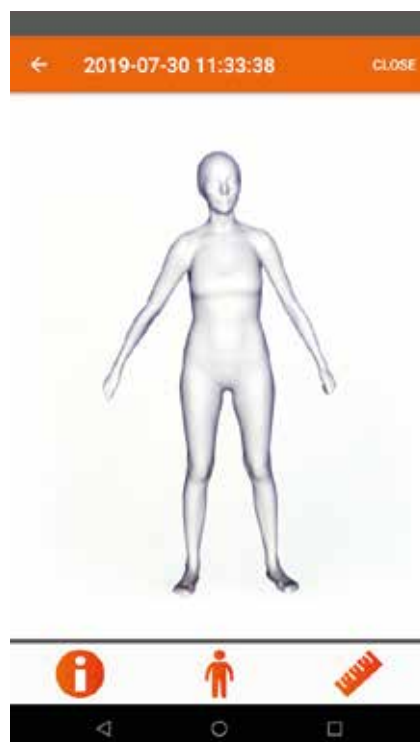

Imagine all your customers having a 3D body scanner in their pocket, now is possible.

3D Avatar body is a mobile app to capture the body in 3D with a smartphone. Technology developed by the Instituto de Biomecánica and powered by AI and data driven 3D models.

With just two images, 3D Avatar body allows to capture the body shape of the body in 3D from two images with any smartphone.

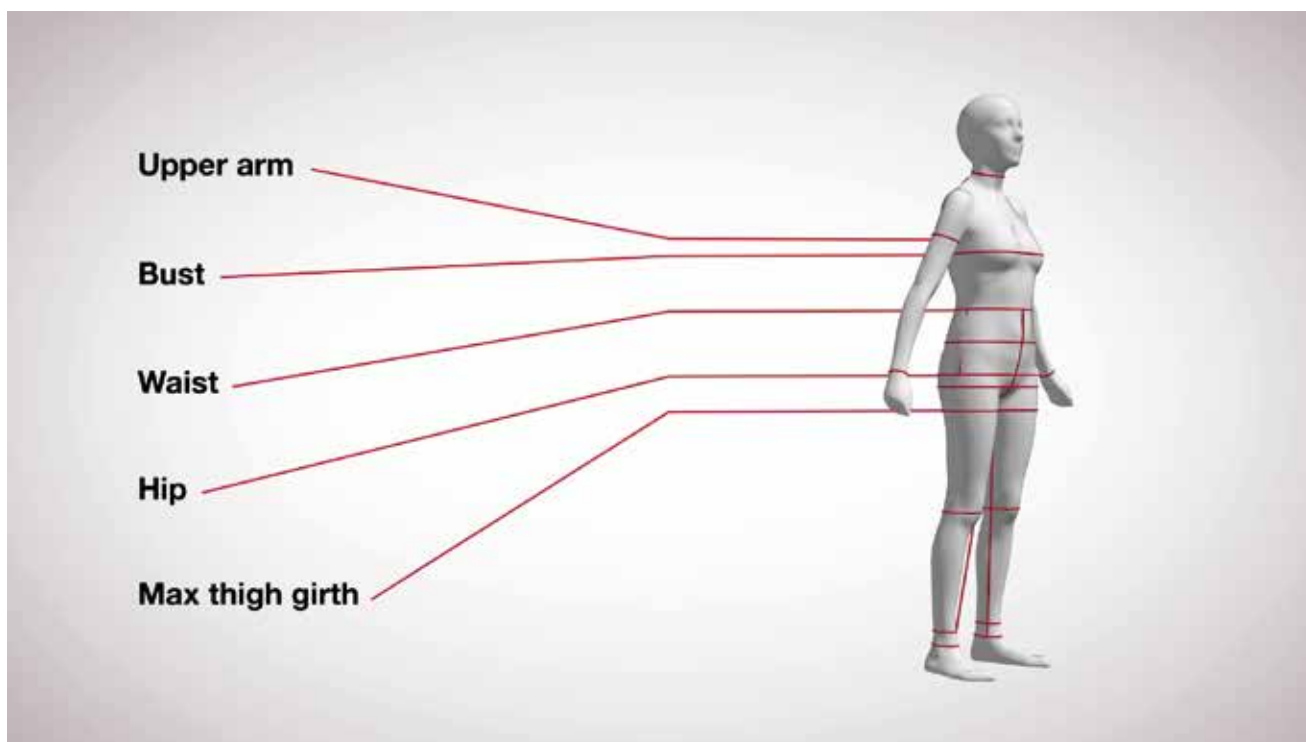

The best digital body-scanning solution on the market:

The app sends the images to the cloud where all the processing takes place, returning, in a few seconds, a precise 3D model and a set of body measurements.

A versatile tool with an excellent user experience

- **Easy to use.** Designed to be used from anywhere
- **Easy integration** with your business. It provides up to 100 measurements and a high-resolution mesh ready to interface any CAD or simulation application
- **High accuracy** for different applications such as virtual try-on, made-to-measure, size allocation or body tracking
- **Guaranteed data protection** based on the General Data Protection Regulation of the European Union 2016/679)
- **Excellent results** for several industries such as Apparel, Healthcare, Sports, Wellness or Entertainment
